📍 Chennai, Tamil Nadu

PROFESSIONAL SUMMARY

Motivated Computer Science Engineering graduate with strong skills in Python, SQL, React.js, and AI/ML development. Experienced in automating workflows, building scalable full-stack applications, and developing AI-powered solutions using LLMs, NLP, and predictive modeling. Adept at problem-solving, agile collaboration, and delivering reliable software solutions that improve operational efficiency. Expanding expertise in data analysis and Power BI.

WORK EXPERIENCE

Ford Motor Private Limited — Summer Intern

Jun 2025 – Jul 2025

- Automated 46 daily system health checks using Python, Playwright, and Ford-LLM across LEAP and LDS platforms efficiently.
- Built 42+ scalable monitoring modules integrated with SQL Server, CRM, Informatica, and Spring Boot systems.
- Designed responsive UI dashboards with real-time alerts and consolidated reports to detect system failures proactively.
- Reduced manual monitoring effort from 3 hours to 10 minutes, improving reliability across 18 European markets.

SRM Technologies — Software Developer Intern

Mar 2024 – Nov 2024

- Developed an AI-driven resume processing platform for automated candidate screening workflows efficiently.
- Built a GenAI-based resume parsing pipeline using BERT, NLP, and Gemini API for improved accuracy.
- Built responsive React.js frontend interfaces with strong UI/UX and integrated Node.js REST APIs with MySQL.
- Designed a React.js dashboard with interactive charts and tested each module for reliability and performance.
- Automated candidate workflows, saving 3 hours/day for a 3-member HR team through efficient system design.

PERSONAL PROJECTS

SowSure

- Developed a crop-yield prediction model using Random Forest trained on NDVI, soil, and weather data.
- Integrated Google Earth Engine and SoilGrids APIs for geospatial insights and spatial analysis.
- Delivered yield estimates for 20+ crops to support loan planning and farm decisions accurately.

NLP to SQL

- Built an English-to-SQL generator using BART and the WikiSQL dataset for database automation.
- Fine-tuned with Gemini for improved schema handling and query accuracy in complex schemas.
- Enabled non-technical users to query databases using natural language without SQL knowledge.

Dynamic Pricing Optimization using Reinforcement Learning

- Developed a multi-agent reinforcement learning framework using PPO-based agents for dynamic pricing optimization.
- Designed reward mechanisms to identify and mitigate algorithmic collusion in competitive markets.
- Built simulation environments to evaluate pricing strategies and agent interactions.
- Analyzed model performance using pricing trends, market competitiveness, and consumer welfare metrics.

SKILLS

Python, React.js, HTML, React Native, Power BI, SQL, Node.js, CSS, FastAPI, Playwright, Excel, UI/UX.

EDUCATIONAL QUALIFICATIONS

SRM Institute of Science and Technology

B.Tech in Computer Science and Engineering

Chennai, India

CGPA: 8.74

CERTIFICATIONS

- Oracle Certified – MySQL 8.0 Database Developer
- Oracle Certified – Cloud Infrastructure Foundations Associate
- Oracle Certified – Generative AI Professional
- NPTEL Certified – Programming in Java

ACHIEVEMENTS

- 2nd Place — HackRush 1.0
- 2nd Place — Generative AI Ideathon

Quiklabs Developer Club
C.Tech Dept., SRMIST
